SELF-GUIDING LEAFLET

#18

Vanderbilt Mansion

NATIONAL HISTORIC SITE • HYDE PARK, N. Y.

UNITED STATES DEPARTMENT OF THE INTERIOR

Oscar L. Chapman, Secretary

NATIONAL PARK SERVICE • Arthur E. Demaray, Director

For some years after Vanderbilt Mansion National Historic Site was established, visitors were conducted on a guided tour of the Mansion. Greatly increased visitation has now made it impossible to provide this service. This self-guiding leaflet, however, we believe will enable you to tour the Mansion enjoyably and satisfactorily. Each of the rooms is labeled, so that you may readily identify it in this leaflet. You may take all the time you wish; you may linger to enjoy whatever appeals to you especially; and you will find our uniformed historical aides happy to answer your questions.

Vanderbilt Mansion was the country home of Frederick W. Vanderbilt. It was designed and built by the firm of McKim, Mead, and White in 1896-98 in an Italian Renaissance style then popular with that firm. At that time, the building cost Mr. Vanderbilt \$660,000 without furnishings. Mr. and Mrs. Vanderbilt occupied this house during the spring and fall. In addition, they had a town house in New York City; a summer house at Bar Harbor, Maine; a camp in the Adirondacks; and for a number of years a house at Newport, R. I. Entertaining on the large estates in this mid-Hudson Valley during the early 1900's was usually limited to

week ends. The Mansion is a magnificent example of the great estates of 50 years ago.

The First Floor

Reception Hall—All the marble is Italian. Large green velvet sofas and bearskin scatter rugs, which formed a setting before the fireplace, have been removed. The top of the old Italian table is of porphyry. The mantel is from an Italian palace, and the old throne chairs around the walls are also of Italian origin. Two French Renaissance cabinets stand at either side of the doorway. *Please turn to your left.*

Study—Woodwork is Santo Domingo

Jewel Cave is a small, beautiful, and interesting cavern. The walls of many of its underground chambers are lined with a solid coating of dogtooth calcite crystals which sparkle like jewels in the light; hence, the name Jewel Cave. Because of this unique formation and an attractive range of color, the cave and a small protective surface area were set aside as a national monument by Presidential proclamation on February 7, 1908. The National Park Service is responsible for its administration and protection. The cave is available for the visitor to see and enjoy and at the same time it is preserved in as nearly a natural state as possible.

HISTORY

The area was originally recorded as a mining claim, known as Jewel Lode, after its discovery by two prospectors, Albert and F. W. Michaud, on August 18, 1900.

While out prospecting, the Michaud brothers were attracted by the noise of wind coming from a small hole in the limestone cliffs

on the east side of Hell Canyon. In the hope of discovering valuable minerals and locating the source of the wind, these men, in company with Charles Bush, enlarged the opening.

The Michaud brothers believed they had discovered a cave which would be of great interest to tourists in the Black Hills. They built a log house nearby for the accommodation of visitors. However, they were unable to attract enough people to make this venture a financial success.

When the area was established as a national monument, the land was a part of the Black Hills National Forest. The area remained under the administration of the United States Forest Service until April 1, 1934, when, by Executive order, the President transferred the area to the National Park Service.

GENERAL DESCRIPTION

Jewel Cave National Monument is located on a high, rolling plateau ranging from 5,200

Certain hazards are inherent in a wilderness. Falling rocks, trees, and branches rarely cause accidents, but watch for them. For your own safety, do not feed or mistreat deer, bears, or other animals. Streams and rivers may be treacherous for swimming and wading. If you plan a cross-country hike, tell the park ranger; never go alone. Use common sense and your vacation is not likely to be marred by accidents.

Saratoga National Historical Park

Self-guide Tour of

SARATOGA BATTLEFIELD

SARATOGA NATIONAL HISTORICAL PARK is a unit of the National Park System administered by the National Park Service of the United States Department of the Interior. The System is dedicated to the conservation of America's scenic, scientific, and historic heritage for the benefit and enjoyment of the people. Please help preserve the natural and historic features by refraining from disturbing, cutting, or destroying wild flowers, plants, shrubs, trees, signs and markers, or any other objects within the park. EXPLORING OR DIGGING FOR OR REMOVAL OF RELICS IS EXPRESSLY FORBIDDEN.

SELF-GUIDE TOUR OF BATTLE AREA STARTING AT BLOCKHOUSE MUSEUM

This folder is intended to help you attain a clearer understanding of the battles of Saratoga. By using this tour guide and the interpretive markers on the Battlefield, the visitor to Saratoga National Historical Park may follow the events of the two battles and identify points of interest of the field of action. This leaflet is not intended to tell the full story of the battles, but should be used as a supplementary guide enabling the visitor to orient himself while in the Park. Persons interested in taking the tour will find the interpretive maps and exhibits at the Blockhouse Museum helpful in understanding the campaign. The attendant on duty can supply additional information on the background, strategy, and objectives of the Burgoyne expedition. Illustrated handbooks containing a concise account of the Saratoga campaign are on sale at the Museum.

FOR YOUR SAFETY

In order that you may enjoy Yellowstone National Park without endangering yourselves or your children, please note and carefully observe these precautions:

While in geyser or hot springs areas, **STAY ON CONSTRUCTED WALKS AND KEEP YOUR CHILDREN ON THEM.** A fall into a boiling pool is fatal; in many places, ground crust that looks safe and solid is thin—dangerous to walk on.

BEARS, DEER, AND OTHER LARGE ANIMALS ARE POTENTIALLY VERY DANGEROUS. OBSERVE THEM FROM A DISTANCE; DO NOT FEED THEM.

Certain hazards are inherent in a wilderness. Falling rocks, trees, and branches rarely cause accidents, but watch for them. For your own safety, do not feed or mistreat deer, bears, or other animals. Streams and rivers may be treacherous for swimming and wading. If you plan a cross-country hike, tell the park ranger; never go alone. Use common sense and your vacation is not likely to be marred by accidents.

CEDAR BREAKS

National Monument · Utah

SITUATED HIGH ON THE Markagunt Plateau in southwest Utah at elevations reaching 10,700 feet, Cedar Breaks National Monument contains a gigantic multicolored natural amphitheater. The Pink Cliffs, a part of the Wasatch formation, have a thickness here of nearly 2,000 feet. They exhibit fantastic erosional features and display an amazing variety of color, 47 different shades having been recognized. With ever-changing tints of the vividly colored rock formations, sweeping vistas, and attractive wildflowers, Cedar Breaks National Monument offers superlative scenic values. One of the most spectacular views is from nearby Brianhead, which has an elevation of 11,315 feet.

The monument is located 21 miles east of Cedar City, Utah, and is surrounded by

Dixie National Forest. It embraces an area of 6,172.20 acres, two-thirds of which consist of high cliffs and steep talus slopes.

Since cedar trees are not evident in the area, the name "Cedar Breaks" is confusing to many visitors. Junipers, which the early settlers called "cedars," grow nearby, but at elevations considerably below the rim of the amphitheater. The settlers also referred to the canyons and cliffs as "breaks" or "badlands."

HISTORY

Early exploration of the Markagunt Plateau began in 1851 when the Mormons settled in Parowan and Cedar City, in the valley to the west. In 1852, church leaders explored the headwaters of the Sevier and
